To whom it may concern

Woodward Governor Nederland BV would like to inform you about the mutual cooperation with TecnoVeritas, Av. Dr. Francisco Sa Caneiro, NEM – Nucleo Empresariel de Mafra, Pav. 36-A, 2640-486 Mafra, Portugal in the field of prime mover control, focused on engine Bi-Fuel / Dual-Fuel retrofits.

Both companies are working together in order for TecnoVeritas to become official **Recognized Engine Retrofitter (RER)**. An RER can buy Woodward products directly and by adding value then provide a complete system offering. The primary goal for Woodward RER's program is to penetrate and secure large and/or complex projects requiring application knowledge and engineering expertise. Due to the special knowledge/commissioning tools required, we agreed that TecnoVeritas can offer this to all countries, which have no USA export restrictions and excluding North America (USA, Canada).

TecnoVeritas and Woodward have each years of experience on a various type of Bi-Fuel / Dual Fuel applications. We believe that through this partnership we can combine our complementary experience, and offer you the optimum Woodward & TecnoVeritas VTEC System for your application. Woodward will provide its full support and back-up for the Woodward components used in these solutions.

Woodward has also developed for TecnoVeritas a basic Multi-Point Dual Fuel software application core. If needed TecnoVeritas can customize/modify/optimize the core software according application requirements.

For and on behalf of  
Woodward Governor Company

John Duineveld

Account Manager – RER Channel Partners in EAME+CIS.
